

Brother Money PRD

Product Name

Brother Money

Tagline:

Personal Money Guide for Everyday Decisions

Positioning:

Simple. Private. Free. Offline-first.

Product Vision

Brother Money helps people answer one question:

Can I safely spend this money today?

Most budgeting apps focus on tracking the past.

Brother Money focuses on making better decisions in the present.

The app protects bills, savings, and emergency reserves automatically, then tells the user exactly how much they can safely spend today.

No subscriptions.

No bank connections.

No ads.

No cloud dependency.

No complicated budgeting.

Core Problem

Most people do not want to manage money.

They want confidence when making spending decisions.

Current finance apps require:

- Creating budgets
- Categorizing everything
- Reading charts
- Learning financial concepts

Brother Money removes all of that.

The user simply records their money and spending.

The app handles the calculations.

Target User

People who:

- Live paycheck to paycheck
 - Want simple financial guidance
 - Dislike budgeting apps
 - Prefer privacy
 - Want offline access
 - Need help making daily spending decisions
-

Core Value Proposition

Open the app.

Enter how much money you currently have.

Instantly see:

- Safe Spend Today
 - Protected Money
 - Available Cash
 - One clear recommendation
-

Product Principles

Simple

The user should understand the app within 30 seconds.

Private

All data remains on the device.

No accounts.

No cloud storage.

No tracking.

Offline First

Works without internet after installation.

Actionable

Every screen should help answer:

Can I safely spend this?

Initial Setup

Completed once during onboarding.

Current Cash

User enters:

- Cash on hand
- Bank balance
- Available money

Whatever method makes sense to them.

Bills

User creates recurring bills.

Examples:

- Rent
- Electricity
- Phone
- Internet
- Insurance

Each bill includes:

- Name
 - Amount
 - Due date
 - Frequency
-

Savings Rule

Examples:

- Save \$20 per week
 - Save \$100 per month
 - Save 10% of income
-

Emergency Buffer

A protected amount that should never be spent.

Examples:

- \$50
 - \$100
 - \$500
-

Categories

Default categories:

- Food

- Transport
- Home
- Bills
- Fun
- Other

User can create custom categories.

Home Screen

The entire product revolves around this screen.

Safe Spend Today

Large number.

Example:

\$42

Meaning:

The user can safely spend up to \$42 today while remaining on track.

Protected Money

Example:

\$218

Includes:

- Upcoming bills
 - Savings commitments
 - Emergency buffer
-

Available Cash

Example:

\$260

Current known money available.

Brother Advice

One sentence only.

Examples:

- You can buy lunch and stay on track.
 - Savings are protected this week.
 - Rent is due in 5 days. Spend carefully.
 - You are ahead of your savings goal.
-

Feature: Update Current Cash

Purpose:

Keep recommendations accurate.

User taps:

My Money Now

Enters:

\$280

App recalculates everything instantly.

Feature: Transaction Logging

Purpose:

Keep spending records accurate.

Not for analytics.

Used to improve recommendations.

Log Expense

User enters:

- Amount
- Category
- Optional note

Example:

Lunch

\$8

Food

Log Income

User enters:

- Amount
- Source
- Optional note

Example:

Side Job

\$50

Transaction Timeline

Simple chronological history.

Example:

Today

- Salary \$500
- Lunch \$8

- Taxi \$5

- Airtime \$2

Current Cash: \$485

No charts.

No reports.

No complex accounting.

Feature: Can I Buy This?

Primary decision-making feature.

User enters:

Item: Shoes

Cost: \$45

App evaluates:

- Current cash
 - Upcoming bills
 - Savings commitments
 - Emergency buffer
-

Safe Purchase Result

Example:

YES

Buying this still leaves:

- Bills protected
 - Savings protected
 - \$37 safe spending remaining
-

Unsafe Purchase Result

Example:

NOT YET

Need \$12 more before this purchase becomes safe.

Safe Spend Calculation

The app continuously calculates:

Available Cash

minus

Upcoming Bills

minus

Savings Commitments

minus

Emergency Buffer

equals

Safe Spend Amount

All recommendations originate from this calculation.

Quick Log Presets

Frequent spending shortcuts.

Examples:

- Coffee
- Lunch
- Taxi

- Airtime
- Groceries

User taps preset and enters amount.

Designed for 2-second logging.

Weekly Summary

Simple text summary.

Example:

This Week

- Saved \$20
- Paid all bills
- Spent \$15 below your safe spending limit

No charts.

No dashboards.

Wishlist Purchases

Users save items they want.

Examples:

- Shoes
- TV
- Phone

The app estimates:

Safe to buy in 12 days.

or

Safe after next payday.

Brother Score

Personal consistency score.

Range:

0-100

Factors:

- Bills paid on time
- Savings protected
- Spending discipline

Examples:

Brother Score: 91

Protected all obligations for 43 consecutive days.

Purpose:

Encourage consistency without feeling like a game.

Offline-First Requirements

- All data stored locally
 - Full functionality without internet
 - No mandatory account creation
 - No cloud dependency
 - No bank integrations
-

Privacy Requirements

- No ads
- No tracking
- No analytics SDKs
- No data selling
- No third-party profiling

User data belongs to the user.

Success Metric

The user opens Brother Money every day before making spending decisions.

Success is not measured by:

- Number of transactions logged
- Time spent in app

Success is measured by:

Did Brother Money help the user make a confident spending decision today?

Future Scope

Included:

- Transaction logging
- Income tracking
- Wishlist purchases
- Weekly summaries
- Brother Score

Explicitly Excluded:

- Bank integrations
 - Investment tracking
 - Credit score tracking
 - Cryptocurrency features
 - Financial news
 - Social features
 - AI chatbots
 - Budget dashboards
 - Pie charts
 - Spending heatmaps
-

Product Promise

Open the app.

Enter how much money you have.

Brother Money tells you exactly how much you can safely spend today while protecting your bills, savings, and future.
